DETAILED ACTION

Specification

The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 and 21-23 are rejected under 35 USC 102 (b) as being anticipated by Houston (US 5,198,710).

Houston discloses a circuit comprising:

- a delay circuit (154, 156) that receives an input signal (IN) and generates a first delayed input signal (A) and a second delayed input signal at the output of the inverter (156);
- a glitch blocking circuit (158), coupled to the delay circuit (154, 156), for removing both positive and negative glitches from the input signal, the glitch blocking circuit comprising:
 - a first PMOS transistor (162) receiving the input signal (IN);
 - a first NMOS transistor (164) receiving the input signal (IN);
 - a second PMOS transistor (160) receiving the first delayed input signal (A);

Art Unit: 2816

- a second NMOS transistor (166) receiving the first delayed input signal (A);
- a latch circuit (168), having an input coupled to an output of the glitch blocking circuit, for providing a generally glitch free signal; and
- wherein the delay circuit comprises at least one transmission gate (154, 156);

Allowable Subject Matter

Claims 8-20 are allowed. The claims are allowed because the prior art does not show that the second delayed input signal connected to the source of the second PMOS and NMOS transistors as recited in claim 8 or the first and second NMOS transistors are coupled to receive the first delayed input signals.

Claims 3-7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims. The claims are allowed because the prior art does not show third inverter having the input connected to the output of the second inverter for generating the second delayed input signal.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DINH T. LE whose telephone number is (571) 272-1745. The examiner can normally be reached on Monday-Friday (8AM-7PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, TIMOTHY CALLAHAN can be reached at (571) 272-1740.
